## Your point of difference at the point of sale.

MEI VN2700 Note Acceptor

\*Note acceptance varies by country

Our legacy of reliable, secure, high performing note acceptors was carved out of the rising 3 million MEI in field installations. The VN Series platform has been at the center of this volume with the VN2700 note acceptor, as a unique building block in the portfolio for unattended MDB retail environments.

Recognized for being one of the industry's most modular payment system platforms, CPI has expanded VN2700 functionality by continuing to add new bezels, cashbox sizes, and a recycling capability. Choice allows an operator to right size their operation with technology based on a location's changing needs.

In addition to modularity, our note sensor technology has set the bar for performance.

We handle street grade notes \$1-\$20 with ease. Wet, wrinkled, dirty, faded, even torn notes are able to easily move through the bill path thanks to our non-contact sensors ensuring the sale and your profits. Our 1 in 20,000 jam rate is second to none.

Security is the top priority in the engineering labs at CPI. Engineers employ advanced algorithms on the acceptors control board, which greatly reduces the acceptance of counterfeit currency. The fully encased optical sensors use multiple wavelengths to validate the bill, ensuring the highest levels of security and note recognition. These enclosed sensors also divert salting attempts and are adverse to vandalism. The design protects the unit from water ingress and debris. The MEI Coupon Program also utilizes this same level of security.

We deliver greater machine uptime and a lower total cost of ownership in every application in which utilized. The VN2700 is the right choice for your vending business.

# mei VN2700 Bezel Suite

## Modular by Design

Operators profit from the ability to choose what's right for their machines. CPI allows you to choose the components that are right for your business. Like all MEI payment systems, the VN2700 is modular by design.

The **High Visibility Bezel (HVB)** is the first choice for 'cash only' applications. The bezel's vivid, multi-colored, LED lights help draw attention to your machine, attracting more sales. An illuminated bill entry highlights where bills are fed, simplifying the transaction for the consumer and increasing satisfaction. Four denomination lights, indicate note acceptance in real-time. And, when a bill is inserted, the appropriate denomination will light up and confirm the transaction value for the consumer.

The High Visibility Bezel (HVB) can strobe thru colors to attract attention. \*Accepts \$1, \$5, \$10 and \$20 bills.

The **Crane Merchant Media Integrated Bezel** was specifically designed to integrate the CPI VN2700 note acceptor into Crane Merchant Media vending machines. This clear bezel fits seamlessly into the side pill panel on Media machines to create a seamless look with the other shopping and payment methods provided on the Media machine.

The **CPI Cashless Bezel** portfolio for MEI VN2700 note acceptors includes solutions that combine acceptance of magnetic stripe cards, contactless cards, mobile wallet applications (like Apple Pay® and Google Wallet®) cash and coupons into a single unit. There's no need to cut additional openings in the vending machine door to accept all forms of payment. MEI Cashless Bezels are among the most robust in the market. They offer the consumer an easy interaction during the transaction, are designed to resist debris accumulation, and require minimal maintenance. Each are part of a PCI-DSS compliant solution when paired with a MEI Advance 5000 telemeter. The 4-in-1+, EasiChoice, and future models are all EMV L1/L2 certified, ready to accept chip card technology. Our 3-in-1 bezel is considered our current "Recycler ready solution." MEI cashless bezels truly accept whatever is in the consumers pocket.

Availability varies by geography

**Traditional Cash Bezels** offer operators different styles to meet varying fit requirements in snack and drink machines. An armored metal version also deters vandalism attempts

A **VNR Recycler module** can be added at any time, right in the field – giving operators the ability to pay back change in notes. US models offer the choice to recycler \$1s or \$5s. Accepting higher note denominations, enabled through this technology ,can a generate 15-35% sales lift. A user friendly menu and 2 digit display help operators with in field updates and maintenance.

**MEI Cashboxes** are also a great feature of VN Series note acceptors. As location sales grow, choose from a variety of cashbox sizes to meet fluctuating demand. MEI cashboxes have dual side-door entry and an easy one button removal feature.

Magazines come in 5 different sizes: 200, 300, 500, 700 and 1000 note capacities. It's important to check the real estate available in your machines before purchasing larger note cash boxes.

Note Acceptance: US – \$1, \$5, \$10, \$20; Australia– \$5-\$50 AUD; Brazil – R42, R\$5, R\$10, R\$20; Mexico – 20-50 pesos
