Cashless capabilities plus a lot more functionality

mei | 4-in-1 plus

The MEI 4-in-1 Plus bezel from CPI is a cashless offering perfect for operators who are looking to accept whatever is in the consumer's pocket. Whether it's traditional magnetic stripe credit cards, contactless cards, cash, or MEI coupon, the 4-in-1 Plus is ready to accept them all from a single payment device.

What is even more exciting is its adaptability for the future. NFC based mobile wallet applications like Apple Pay® and Google Wallet® are growing in adoption. These wallets store card data within an app on consumer smartphones which are then accessed for payment at the point of sale. Because of its NFC (near field communication) or contactless capability, this CPI cashless bezel is ready to accept payment from the different mobile wallets offered in the market today.

A convenient 3 button interface (Yes, No, Cancel) on the bezel allows the consumer to interact with interactive display screens used on today's vending machines. Consumers can follow along with the transaction and complete payment using the MEI 4-in-1 Plus' button interface or have the option use touch screen commands displayed on the interactive screens. These interactive screens are ideal for deploying loyalty and advertising programs at the vending machine.

The 4-in-1 Plus is also EMV L1 and L2 certified for contactless, important for the October 2015 liability shift from card issuers to merchants. This certification also accomplishes the collective industry goals of creating a more secure method of cashless payment acceptance. The bezel is PCI-DSS certified when paired with a MEI Advance 5000 telemeter, which validates the security of the data across the entire cashless transaction.

CPI offers a total payment system package for consumers and operators in the 4-in-1 Plus acceptor.

Display screens can interact with the 4-in-1 Plus.

Tap-and-go contactless payment technology

MEI® 4-in-1 Plus Acceptor

Four key factors make a difference between your business and your competition's

Convenience

The 4-in-1 Plus offers consumers payment options similar to those found in convenience stores, featuring an express transaction with contactless payment. With one tap, consumers can make a purchase with their card or mobile payment and be on the move. Factor in the 4-in-1's easy-to-read, high-contrast display that points to and explains all transaction activity – and you've re-defined "convenience." Simply follow its bright LED lights to payment choice!

As an added benefit, the 4-in-1 design allows operators to keep all the payment options on one device and in one mounting. So, if your machine door validator openings meet ADA (American Disability Act) standards, so will all of your payment options. Cash, coupon, credit, contactless are all in reach. Maintenance is minimal. The vertical swipe-style credit card reader and bill path are designed to resist water ingress and stop debris from accumulating.

Compatibility

When introducing credit card payment technology into your machines, compatibility is key. With the 4-in-1 Plus, adding cashless payments is easy: interface with a MEI Advance 5000™, Crane Navigator, or other compatible industry telemeters, to process credit transactions. Or, link your 4-in-1 Plus bezel to a back-end PC through a CPI provided Application Programming Interface (API) and run any retail back end.

Profitability

If you have a payment system that offers convenience, compatibility and low maintenance, profitability naturally will follow. More payment options means fewer consumers will walk away because they lack cash. 4-in-1 Plus payment features and industry certifications increase the profitability of your machines. Experience greater sales volume and improved site retention. Add the superior performance and high acceptance rate you expect from MEI note acceptors, and you have the total payment system package.

Easy installation and maintenance

The 4-in-1 Plus fits right in — literally. It easily installs where other full-faced bill validators are currently in use. No additional openings need cut. Just use existing machine door mountings. If a MEI validator is already in place, no need to choose between a cash or cashless reader. Simply remove the older bezel and install the 4-in-1 Plus bezel onto the MEI validator. It's that easy.

Products Specs at a Glance

Power Consumption	Acceptance: 15 Watts Operating Environment - 15° C - 60° C
Power Sources	22 VDC to 45 VDC
Interface	MDB
Bill Insertion	4-Way
Certification and Support	PCI-DSS and EMV L1 and L2 contactless Mobile Payment Support MiFare, Felica compatibility
